

Advanced Placement (AP):

AP classes are advanced high school courses with similar rigor to that of a college course.

Below are some key characteristics of AP courses:

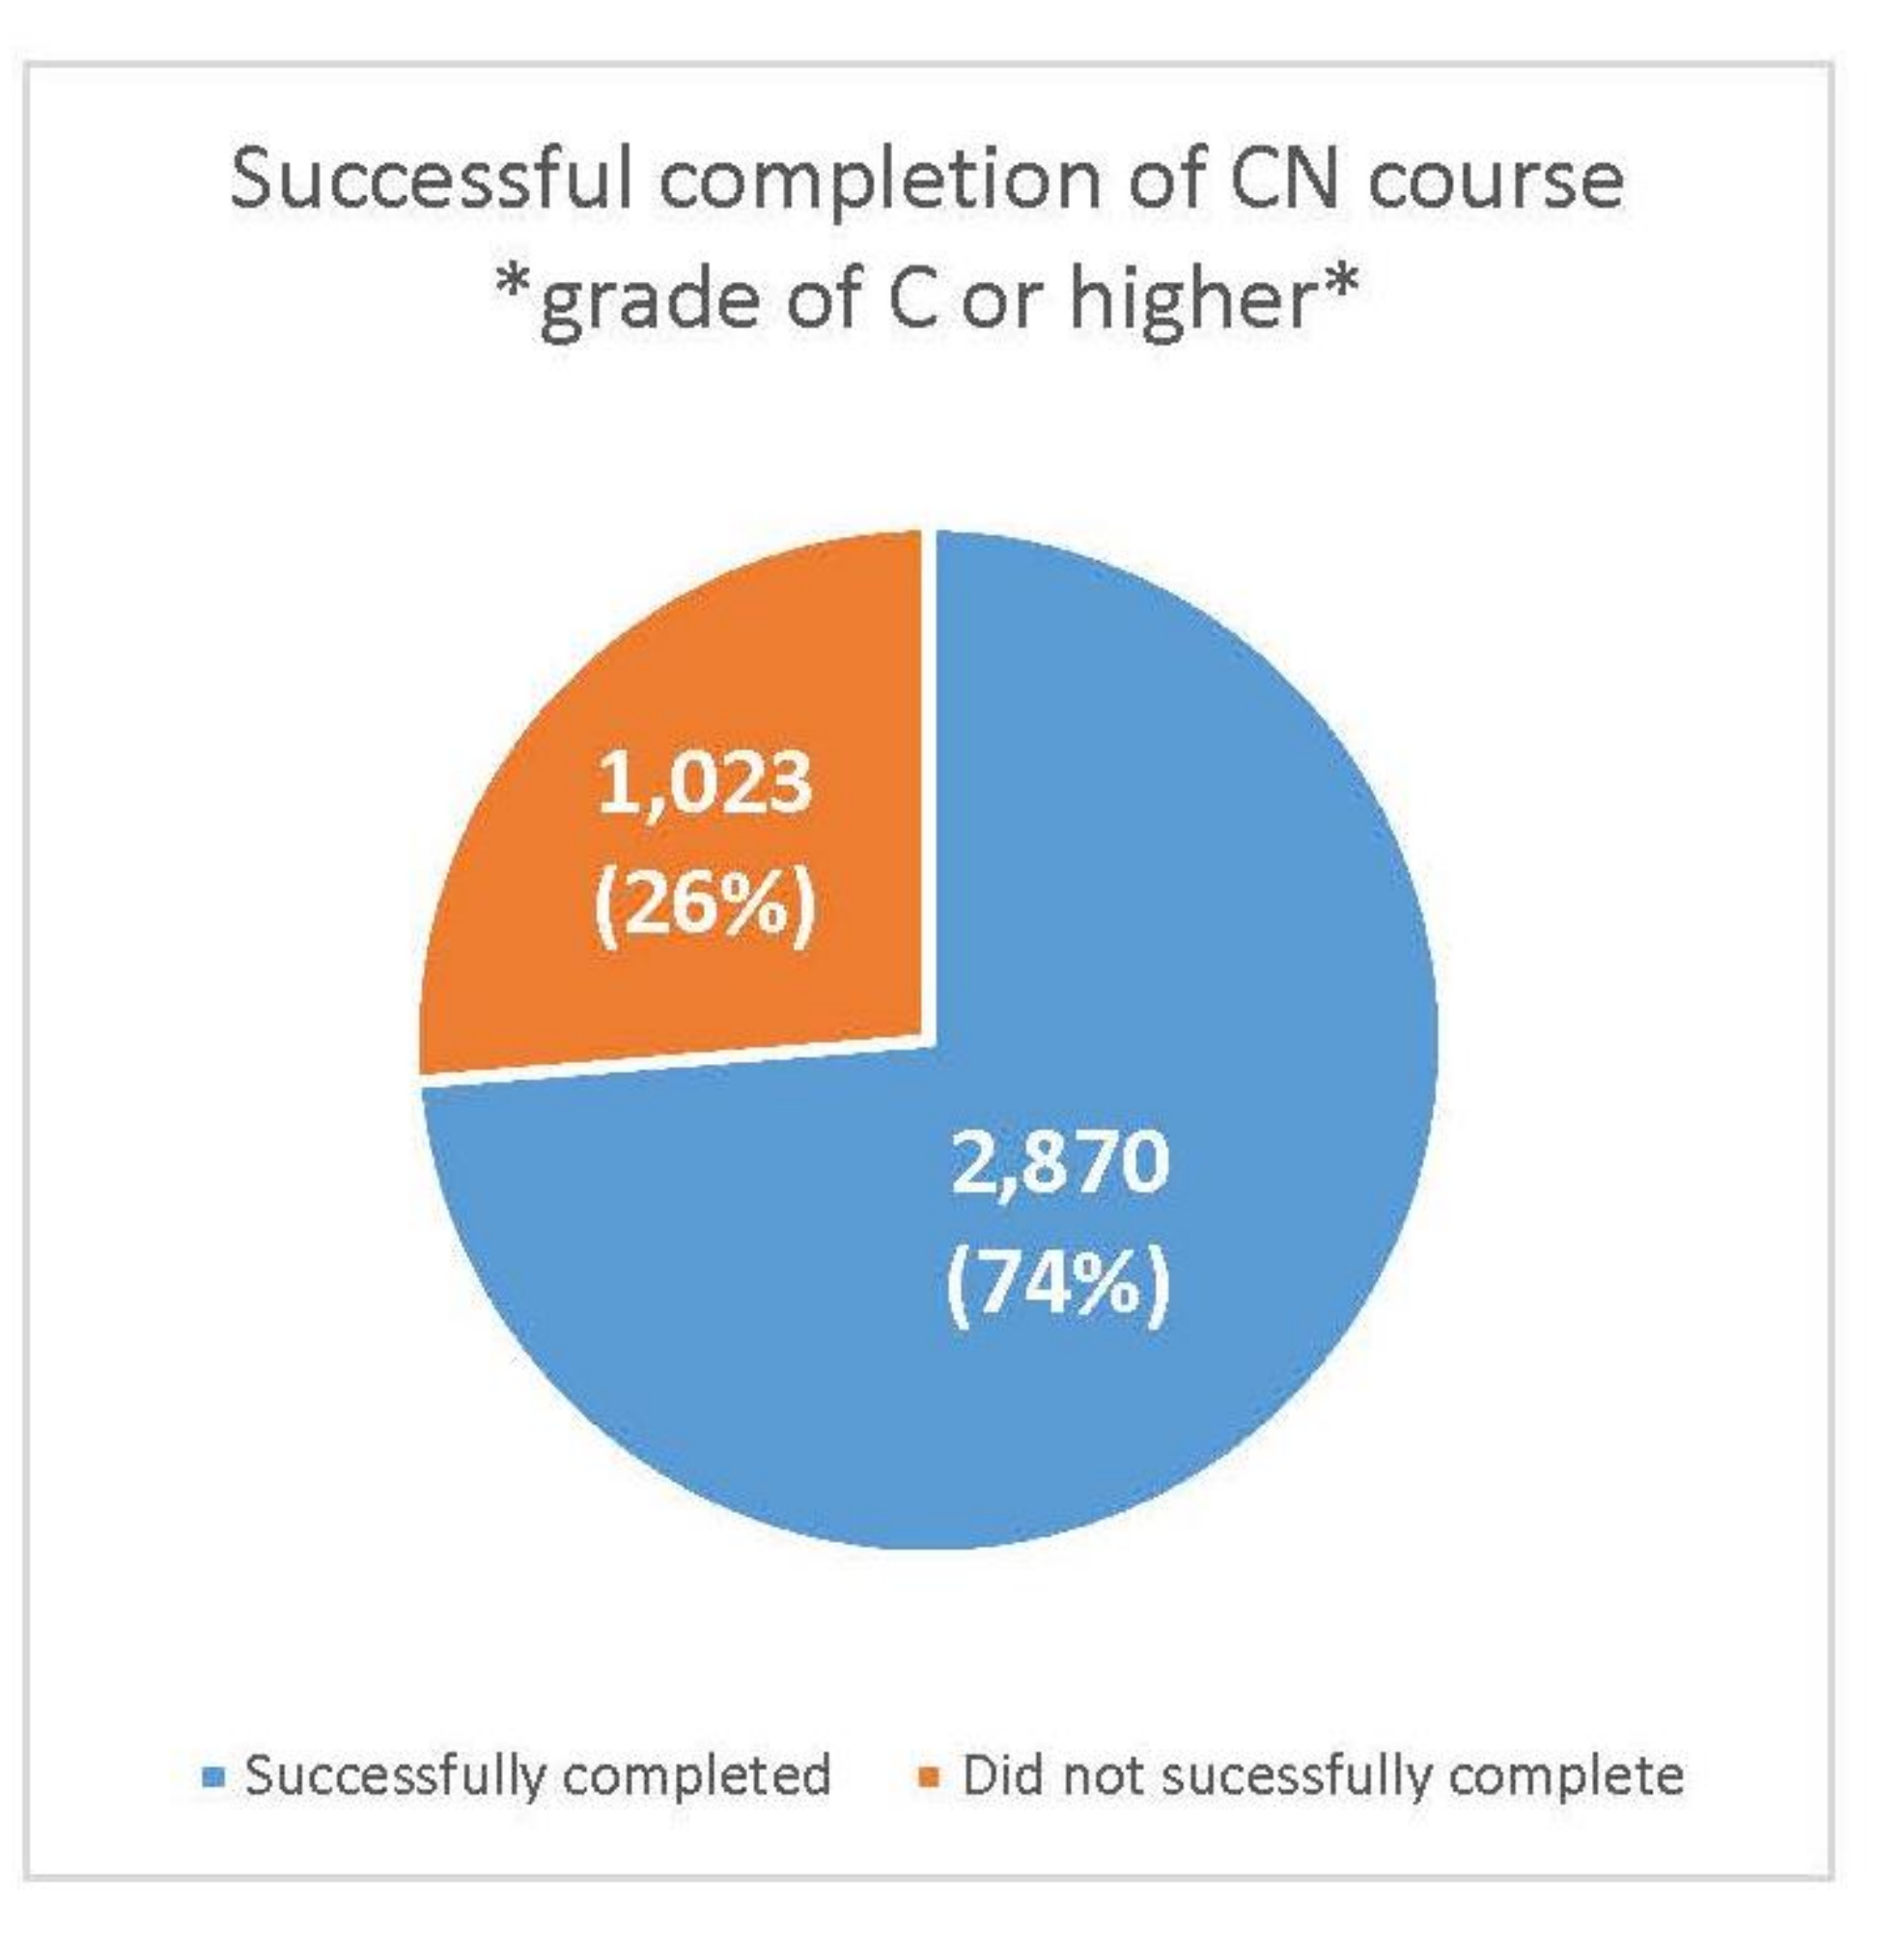

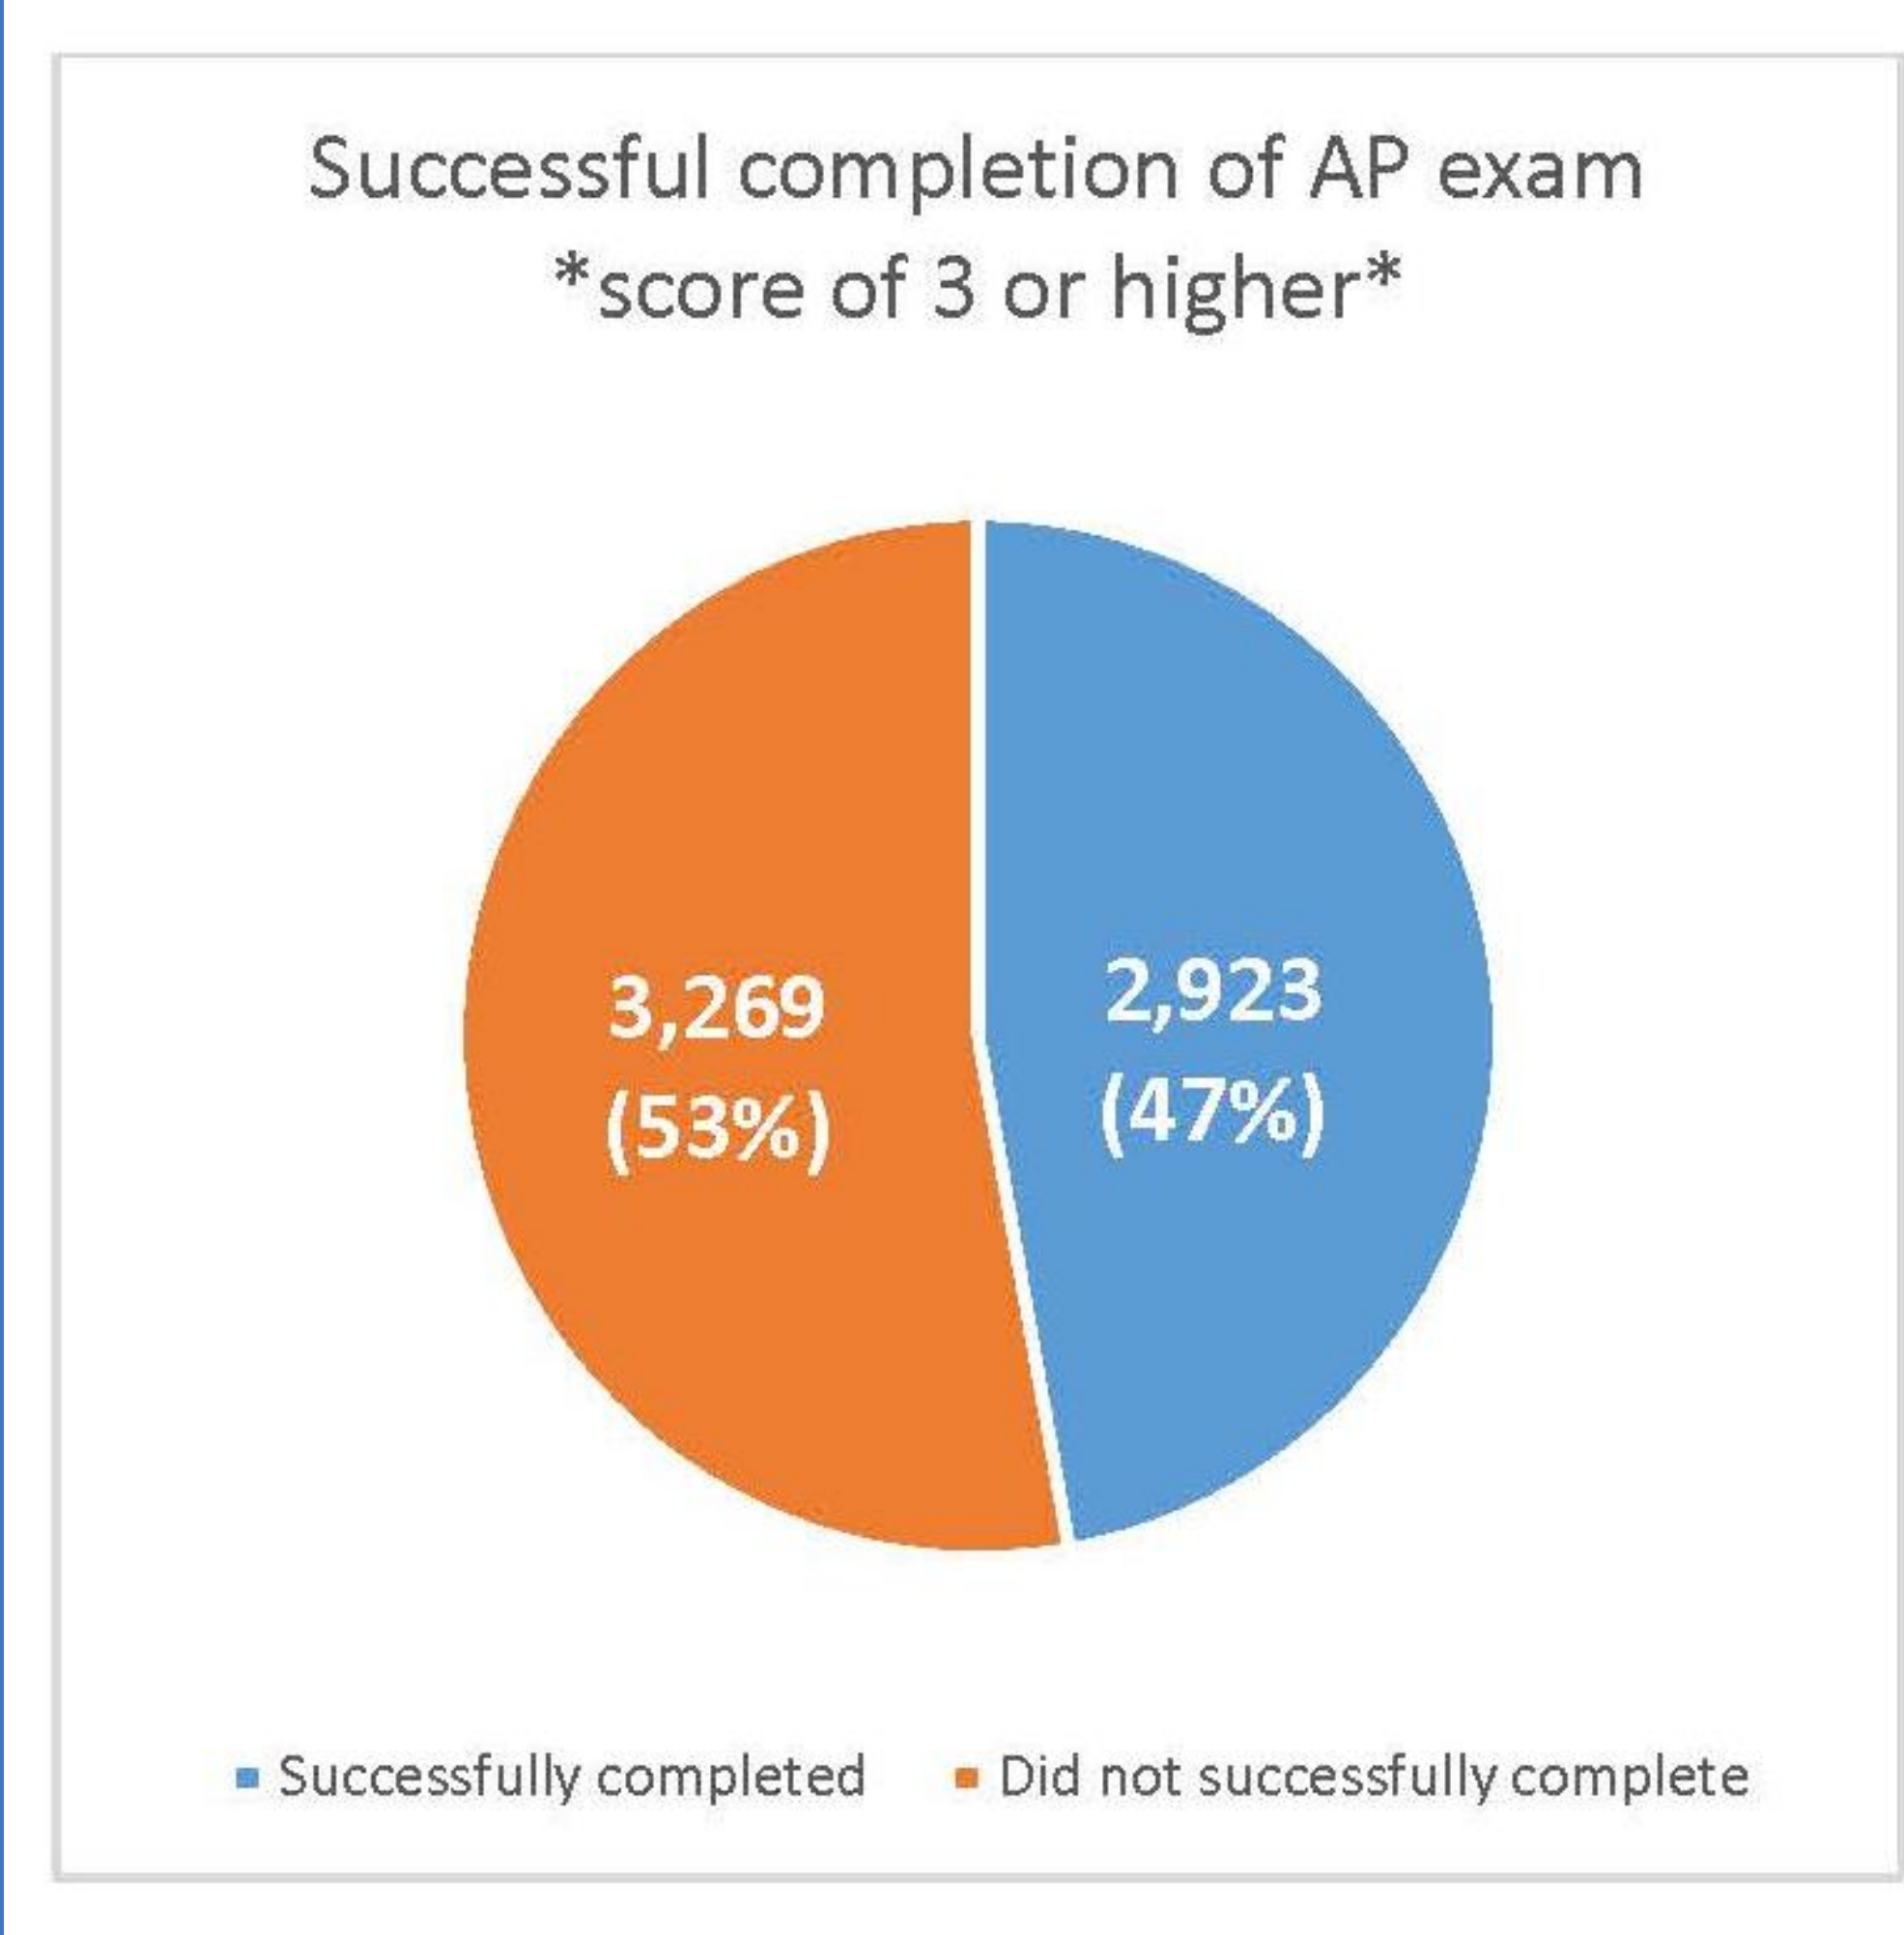

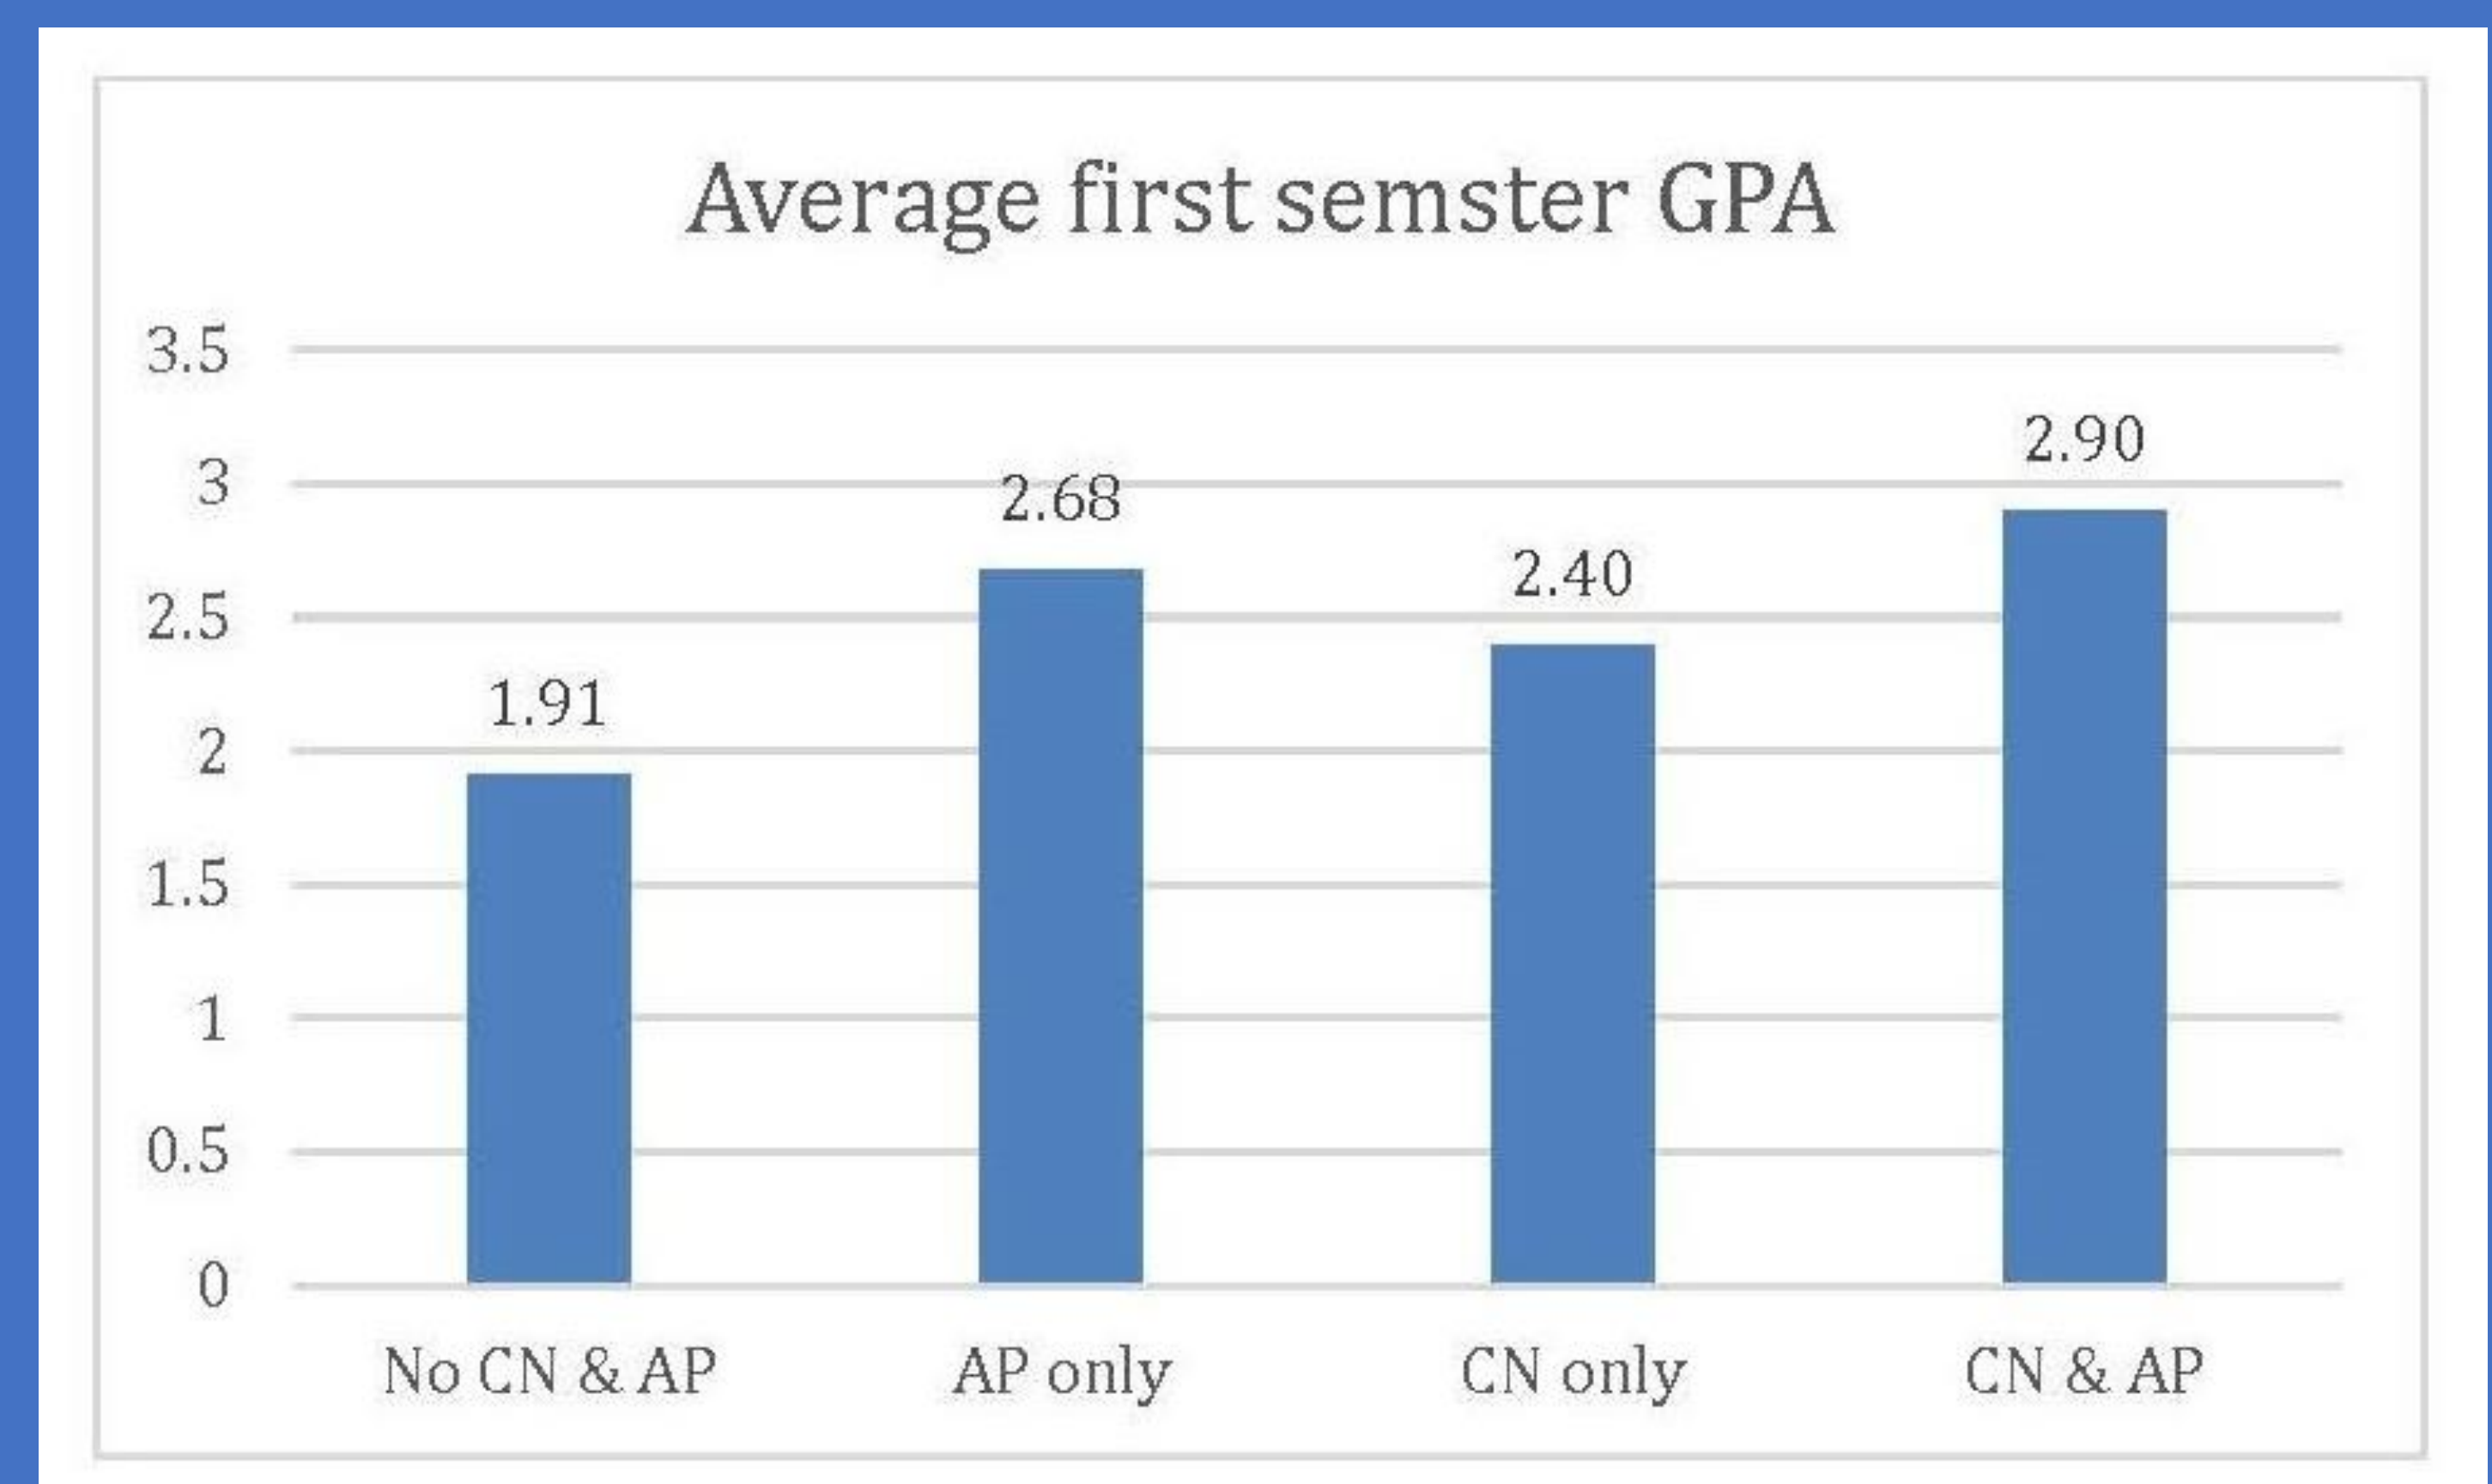

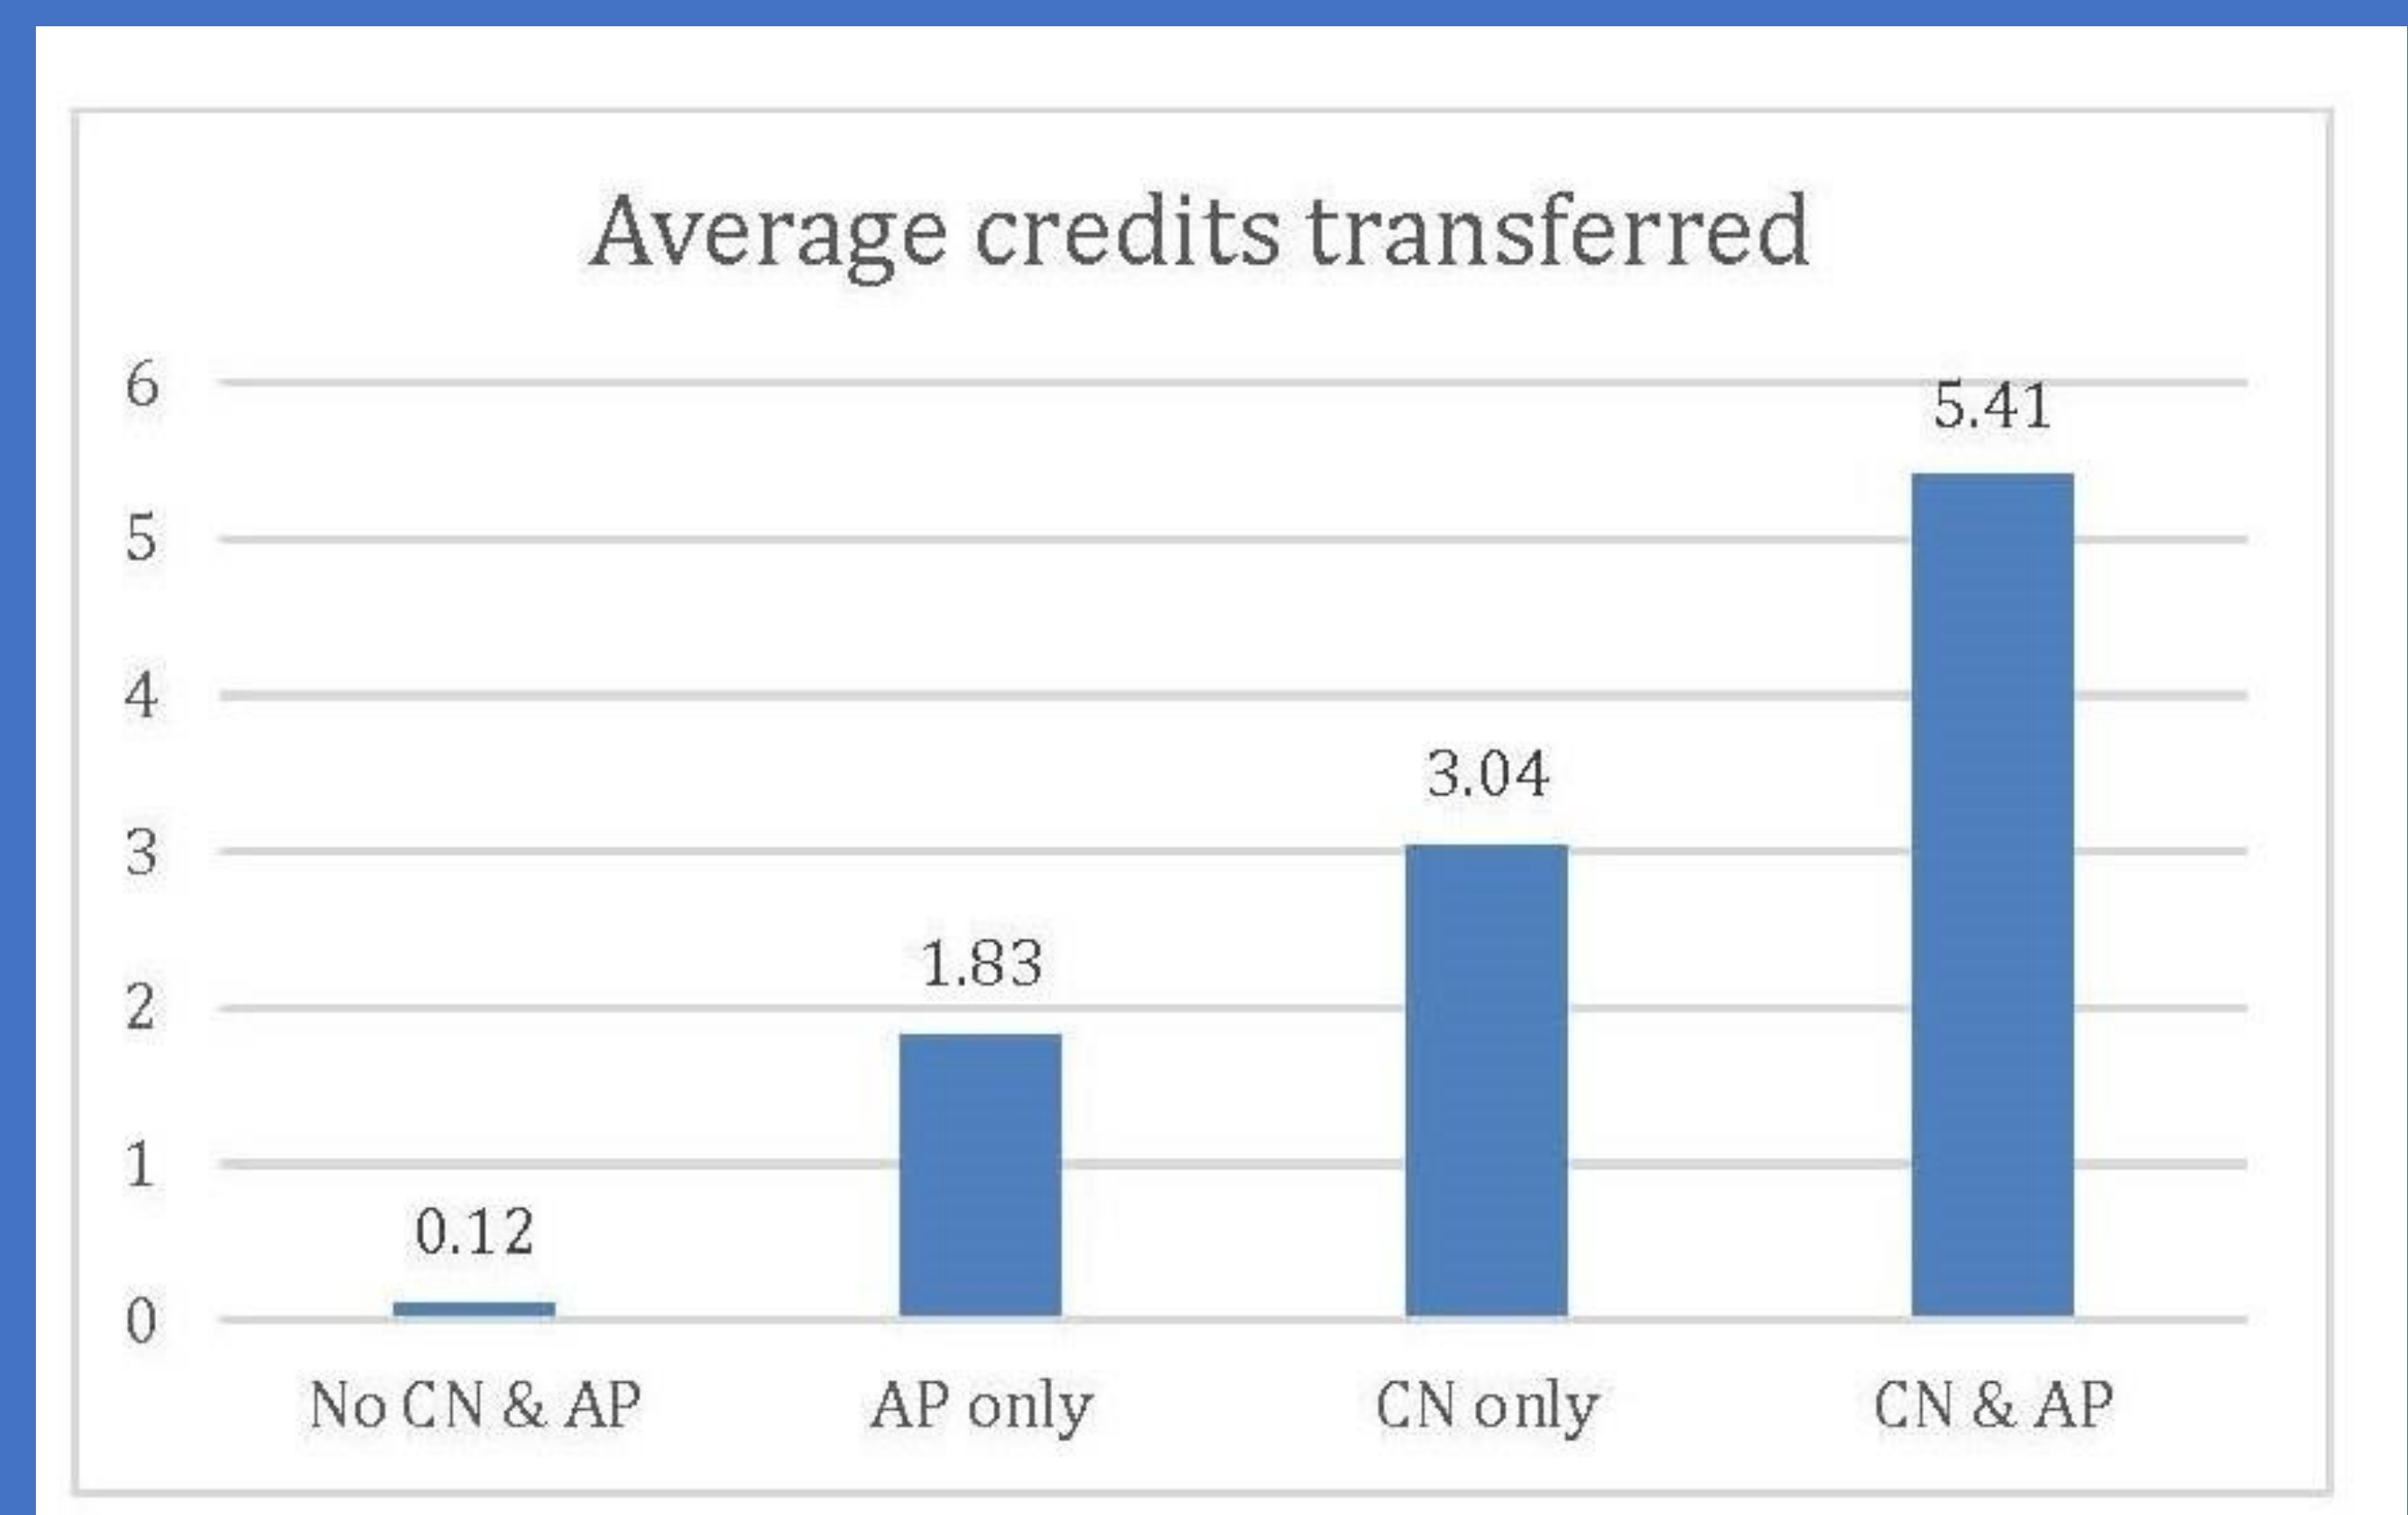

- Students are enrolled in a course for an academic year and then take a comprehensive exam to test their proficiency in the course material.
- Depending on the AP exam score received students can be potentially waived from taking certain introductory college courses and/or receive college credits for the course.
- Students receive high school credit for the course, regardless of the AP exam grade earned, as long as they pass the coursework.
- Courses are taught by a high school teacher.

What's the difference between AP & College Now?

College Now (CN):

College Now allows NYC public high school students to enroll in college-credit courses throughout the City University of New York (CUNY).

The goal of College Now is two-fold; to allow students to earn college credits and to expose them to the rigors of college-level work.

Although program formats vary by campus, below are some general program characteristics:

- Classes are undergraduate level courses.
- Courses take place at the high school, college campus, online, and/or a combination.
- Students earn transcribed college credits from the respective college upon successful completion of the course.
- Instructors are college faculty (tenure-track and/or adjunct).
